### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

2. Claims 6, 29, 36-51 have been cancelled.

#### *Allowable Subject Matter*

3. The following is an examiner's statement of reasons for allowance:

Regarding claim 16, **Delavaus** (US5060312) discloses An optical sampling system (*fig 2*), comprising: a data input to receive a test signal (*fig 2*  $Es(t)$ ), a sampling pulse input to receive a sampling pulse (*fig 2*,  $Elo(t)$ ), an optical system configured to produce a first combination of the test signal and the sampling pulse having a first relative phase difference between the sampling pulse and the test signal (*fig 2*, 160 produces a combination of a mixture of the data and sampling pulses having relative phase difference created by phase shift 166), and to produce a second combination of the test signal and the sampling pulses (*fig 2*, 200 produce a second set of combinations),

a first balanced detector (*fig 2*, 132), and a second balanced detector (*fig 2*, 134), configured to receive the first combination having the first relative phase difference and the second combination having the second relative phase difference, respectively, and produce a first balanced signal and a second balanced signal, respectively (*col 9*, *ln 32-52*), and a processing

Art Unit: 2613

system (*fig 2, 130*), configured to combine the first balanced signal and the second balanced signal (*fig 2, summing  $IH(t)$  and  $IV(t)$  and output  $R(t)$* ).

**Delavaus** does not disclose expressly having a retardation plate configured at a location as specified *to receive the second combination* and to modify a relative phase difference between the sampling pulse and the test signal so that the second combination has a second relative phase difference, *wherein the second relative phase difference is different from the first relative phase difference* (Delavaus's relative phase difference of the first combination and the second combination is the same).

Examiner found no motivation to modify **Delavaus**'s disclosure in such a way that would read on applicant's claim 16.

Prior art made of record does not teach an optical sampling system having a retardation plate configured at a location as specified *to receive the second combination* and to modify a relative phase difference between the sampling pulse and the test signal so that the second combination has a second relative phase difference, *wherein the second relative phase difference is different from the first relative phase difference*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2613
